

Movie Recommendation System Project Report

Prepared by: Arpita Panda

Abstract

This project develops a movie recommendation system using machine learning techniques to suggest movies based on user preferences and similarity analysis.

Introduction

Recommendation systems help users discover movies based on content similarity and preferences.

Objectives

Build a recommendation engine, analyze movie data, and provide personalized suggestions.

Tools Used

Python, Pandas, NumPy, Scikit-learn, Streamlit, TMDB Dataset.

Methodology

Data preprocessing, feature extraction, cosine similarity calculation, and recommendation generation.

Results

The system recommends movies similar to the selected movie using content-based filtering.

Conclusion

The project demonstrates the effectiveness of machine learning in personalized movie recommendations.
